Conventional blowers are buffeted up to 120 times a second with shock waves traveling at the speed of sound. The resulting pulses and vibrations steal power and shorten the life of every bearing, gear and other drive train component.

ROOTS RAS-J air blowers and RGS-J gas blowers have a solution to your problem. ROOTS' exclusive WHISPAIR™ jet design is proven to equalize pressure pulses, reducing shock wave intensity by up to 40%. Here's what this means to you:

Longer bearing life

Less shock transmitted through the impellers means approximately 20% longer bearing life. Other components such as timing gears, drive couplings, v-belts and motor bearings suffer less stress, too.

Lower energy consumption

The patented ROOTS WHISPAIR's jet design precisely meters backflow and channels air pressure in the direction of impeller rotation. The result is an extra "push" that reduces the power required to drive the impellers.

Lower Noise

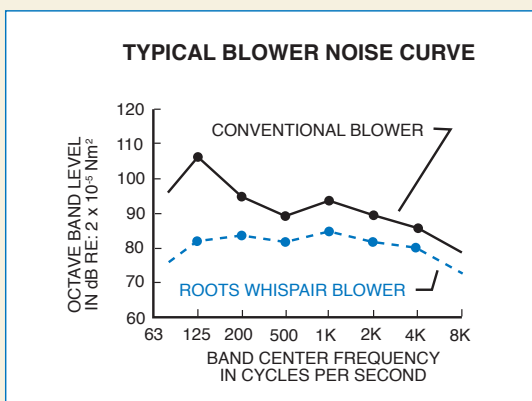

Pressure pulses are also the major source of blower and gas blower noise. The pressure equalizing effect of the Whispair™ design reduces noise by approximately 5 dBA, while reducing wear on your piping valves and sensitive instrumentation.

Testing

Every Roots blower is mechanically tested to design extremes of speed, pressure and temperature. Roots validates the flow capacity as well as major critical factors such as vibration, oil circulation and operating clearances. This ensure your blower is manufactured to the highest standards with performance proven to meet your process needs. Special testing requirements are welcome.

Cylinder and headplates

All units are configureable to horizontal or vertical flows. Cylinders and headplates are precision machined grey iron, with cast ribs for improved strength and heat transfer. All RAS-J and RGS-J blowers incorporate

a wrap-around plenum design and feature ROOTS' exclusive WHISPAIR™ jet. Castings may be subjected to strenuous pressure and leak testing to ensure integrity in the most demanding applications.

Impellers

Made from ductile iron with a tensile strength of 60,000 PSI, impellers are statically and dynamically balanced to industry accepted standards, providing you with years of trouble free performance and durability.

Shafts

Impeller shafts are alloy steel forgings, flange connected to the impeller bodies with high-tensile socket head capscrews. Standard blowers have precision machined labyrinth seals where the shaft passes the casing headplate. A single piston ring or multiple piston rings may also be employed with various purge gas configurations to meet customer specific requirements.

Bearings

Long-life, double -row spherical roller bearings support the shaft assemblies and control axial location of the impellers at the thrust end. An inboard 5th bearing minimizes drive shaft stress on 1000J through 1400J frame size, V-belt driven blowers and gas blowers.

Timing Gears

The impellers rotation is timed by a pair of precision machined, forged steel gears. These wide-faced spur gears are manufactured to AGMA standards and are carburized and ground with a hardness of 58-60 Rc. Spur gears do not transmit harmful axial loads to bearings and motors.

On 1000J frame size units the gears are secured to the shafts by a taper fit. Larger sizes use a proven taper locking device providing an easily adjustable and releasable mechanical shrink fit. No shaft-weakening keyways or locking pins are required.

Lubrication

Both RAS-J blowers and RGS-J blowers offer a positive pressure lubrication system which can extend bearing life by up to 50%. This system is entirely self-contained and includes an integral drive oil pump, distribution piping, gearbox oil sump, filter oil cooler, pressure gauge, relief valve and low oil pressure safety switch.

This is a true pressure lubrication system putting clean, cool pressurized oil right into the critical area.

The RAS-J blower is also available with an energy-saving splash lubrication system in place for the pressure system.

Each unit tested, certified.

Every RAS-J blower and RGS-J gas blower is tested at the factory to guarantee that each unit meets performance specifications. Test procedures include a complete flow test at full speed and pressure, as well as vibration measurement at three different performance levels.

Contact Dresser Roots for details on other available blower sizes.

Application Engineering

Roots may have the largest & most experienced product support network in the industry. Around the world, we have an office or a service center where you need it. Dresser Roots supports your business by delivering products and services designed, built and delivered to perform in your unique process environment. We have the desire to work with you and develop a detailed solution configured to meet and, ideally to exceed your requirements. Roots has been “the quiet leader” in the blower business since 1854 providing long-lasting performance in the worlds toughest applications.

Global Presence

- 55 Distributors with 95 locations in North and South America
- 35 Agents and Reps locations in North America
- Direct Sales Offices located in Asia, Europe, South America and North America
- 4 Authorized Distributors in China
- 2 Authorized Distributors in Australia
- 2 Authorized Distributors India
- 1 each Authorized Distributors in Saudi Arabia, Egypt, South Africa, Thailand, Pakistan, Japan, Taiwan, Philippines, Malaysia, New Zealand, South Korea, U.A.E, Turkey and Kuwait.
- 1 each Authorized Distributors in Major EU countries except France, Switzerland and Belgium

Service

Seven (7) Factory Authorized and Trained Service Centers

- Houston, Texas
- Connersville, Indiana
- Mexico City, Mexico
- Skelmersdale, UK
- Dubai, U.A.E
- Shanghai, China

About Dresser Roots

Dresser Roots, a major product brand of Dresser, Inc., is the manufacturer of the original ROOTS™ blower, centrifugal compressors and control systems. ROOTS® air and gas moving equipment is used in a wide variety of applications, including MVR (Mechanical Vapor ecompression), water and wastewater treatment, flue gas desulphurization, petrochemical and chemical processes, conveying, and other general industrial applications.

About Dresser, Inc.

Dresser, Inc. is a leader in providing highly engineered infrastructure products for the global energy industry. The company has leading positions in a broad portfolio of products, including valves, actuators, meters, switches, regulators, piping products, natural gas-fueled engines, retail fuel dispensers and associated retail point-of-sale systems, and air and gas handling equipment. Leading brand names within the Dresser portfolio include Dresser Wayne® retail fueling systems, Waukesha® natural gas-fired engines, Masoneilan® control valves, Consolidated® pressure relief valves, and Roots® blowers. It has manufacturing and customer service facilities located strategically worldwide and a sales presence in more than 100 countries.
